

# Personal Portfolio Website

## Problem Description

In this project, you will create a personal portfolio website using HTML5 elements that you have learned in this class. The goal is to apply your knowledge of HTML structure, syntax, and elements to build a functional and aesthetically pleasing portfolio that showcases your skills and projects.

## Key Considerations Before Attempting the Project

1. **Understanding HTML Structure:**
  - Familiarize yourself with the basic structure of an HTML page, including the `<!DOCTYPE>` declaration, `<html>`, `<head>`, and `<body>` sections.
  - Ensure proper nesting and closing of tags.
2. **Content Organization:**
  - Use appropriate HTML elements to organize and present content.
  - Use headings (`<h1>` to `<h6>`), paragraphs (`<p>`), and other text formatting tags to structure your content clearly.
3. **Element Grouping:**
  - Use `<div>` tags to group related elements and create sections in your layout.
4. **Text Formatting and Emphasis:**
  - Utilize formatting tags like `<b>`, `<strong>`, `<i>`, `<em>`, `<mark>`, `<small>`, `<s>`, and `<big>` to emphasize and style text appropriately.
5. **Lists and Links:**
  - Create ordered lists (`<ol>`), unordered lists (`<ul>`), and definition lists (`<dl>`) to systematically present information.
  - Use anchor tags (`<a>`) to create hyperlinks and link between different pages of your portfolio.
6. **Project Pages:**
  - Home Page: A welcoming introduction to who you are.
  - About Me Page: Detailed information about your background, skills, and interests.
  - Projects Page: Showcase of your work and projects.
  - Contact Page: Contact form or contact information for visitors to reach you.

## Software Requirement Specifications

### Basic "Hello World" Webpage

- Create a simple HTML file with a "Hello World" message to understand the fundamental HTML syntax.

- Include the `<!DOCTYPE>` declaration at the top of the file.
- Add comments for better code readability.

## HTML Page Structure

- Use `<head>` to include metadata, title, and links to stylesheets.
- Use `<body>` to include the main content of your website.

## Content Elements

- Use paragraphs (`<p>`), headings (`<h1>` to `<h6>`), horizontal rules (`<hr>`), line breaks (`<br>`), and spans (`<span>`) to organize and present content.
- Use `<div>` tags to group elements and create sections.

## Text Formatting

- Apply HTML attributes, focusing on the `style` attribute for inline styling.
- Use formatting tags like `<b>`, `<strong>`, `<i>`, `<em>`, `<mark>`, `<small>`, `<s>`, and `<big>` to emphasize and format text.

## Lists

- Create ordered lists (`<ol>`) and unordered lists (`<ul>`) for organized information.
- Use definition lists (`<dl>`) to present terms and descriptions.

## Links

- Use anchor tags (`<a>`) to create hyperlinks.
- Ensure navigation between Home, About Me, Projects, and Contact pages.

## Specific Content Creation Guidelines

### Home Page

- **Title:** "Welcome to My Portfolio"
- **Introduction Paragraph:** A brief introduction about yourself, including your name, profession, and a short summary of your expertise.
- **Navigation Links:** Add links to the About Me, Projects, and Contact pages.

### About Me Page

- **Title:** "About Me"
- **Section 1: Background**
  - Paragraphs describing your educational background, work experience, and any relevant personal information.

- **Section 2: Skills**
  - Use an ordered list to highlight your key skills (e.g., HTML, CSS, JavaScript).
- **Section 3: Interests**
  - Use a paragraph to talk about your interests and hobbies.

## **Projects Page**

- **Title:** "My Projects"
- **Project Entries:**
  - For each project, create a subsection with a heading (project title) and a paragraph describing the project, your role, and the technologies used.
  - Include links to the project if available (e.g., GitHub repository or live demo).

## **Contact Page**

- **Title:** "Contact Me"
- **Contact Form:**
  - Use a form element with fields for name, email, and message.
  - Use proper form elements like `<input>`, `<textarea>`, and `<button>`.
- **Alternative Contact Information:**
  - Provide additional contact details such as your email address or social media profiles using anchor tags.
