

Online Bookstore Webpage

Problem Description

In this project, you will design a simple webpage for a fictional online bookstore. The goal is to create a well-structured, accessible, and visually appealing webpage using HTML5 and CSS3. The webpage should include a table displaying book details, an interactive form for newsletter subscriptions, various HTML5 semantic tags for accessibility, an embedded image banner, a promotional video, and a pre-built stylesheet to demonstrate the impact of CSS3.

Key Considerations Before Attempting the Project

1. **HTML Structure and Semantics:**
 - Use appropriate HTML5 semantic tags (e.g., `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<footer>`) to structure the webpage for better accessibility and readability.
2. **Content Organization:**
 - Ensure the content is organized logically and presented clearly.
 - Use tables to display structured data, forms to collect user input, and media elements to enhance visual appeal.
3. **Accessibility:**
 - Use semantic HTML5 tags to improve accessibility.
 - Ensure form elements are properly labeled for screen readers.

Software Requirement Specifications

Webpage Structure

- **Header Section:**
 - Use a `<header>` tag to include the website logo and navigation links (e.g., Home, Books, About Us, Contact).
 - Embed an image banner within the header.
- **Main Content:**
 - Use a `<main>` tag to encompass the primary content of the webpage.

Book Details Table

- **Table Structure:**

- Use a `<table>` element to display book details.
- Include table headers (`<th>`) for columns: Title, Author, Genre, Price.
- Use table rows (`<tr>`) and table data (`<td>`) to populate the book information.

Newsletter Subscription Form

- **Form Structure:**
 - Use a `<form>` element to create an interactive form for users to subscribe to a newsletter.
 - Include input fields for name, email, and preferences.
 - Use appropriate input types (`<input>` and `<select>`), labels (`<label>`), and a submit button.

Media Elements

- **Image Banner:**
 - Embed an image banner using the `<img>` tag within the header section.
- **Promotional Video:**
 - Embed a promotional video using the `<video>` tag with appropriate controls.

Footer Section

- **Footer Content:**
 - Use a `<footer>` tag to include footer content such as copyright information, social media links, and contact details.

Specific Content Creation Guidelines

Header Section

- **Website Logo:**
 - Use an `<img>` tag to display the bookstore logo.
 - Ensure the logo is appropriately sized and positioned.
- **Navigation Links:**
 - Use an unordered list (`<ul>`) with list items (`<li>`) and anchor tags (`<a>`) to create navigation links (e.g., Home, Books, About Us, Contact).

Book Details Table

- **Table Headers:**
 - Create a row with `<th>` elements for "Title", "Author", "Genre", and "Price".
- **Table Rows:**

- Populate the table with sample book details using `<tr>` and `<td>` elements.

Newsletter Subscription Form

- **Form Elements:**

- Name: `<label for="name">Name:</label> <input type="text" id="name" name="name" required>`
- Email: `<label for="email">Email:</label> <input type="email" id="email" name="email" required>`
- Preferences: `<label for="preferences">Preferences:</label> <select id="preferences" name="preferences"> <option value="fiction">Fiction</option> <option value="non-fiction">Non-Fiction</option> <option value="mystery">Mystery</option> <option value="fantasy">Fantasy</option> </select>`
- Submit Button: `<button type="submit">Subscribe</button>`

Image Banner

- **Banner Image:**

- Use the `<img>` tag to embed an image banner. Example: ``

Promotional Video

- **Video Embedding:**

- Use the `<video>` tag to embed a promotional video with controls. Use any free video for the example. Example: `<video controls> <source src="promo.mp4" type="video/mp4"> Your browser does not support the video tag. </video>`

Footer Section

- **Footer Content:**

- Include text for copyright information.
- Use anchor tags for social media links.
- Provide contact details using `<p>` tags.
